

## **Meade County School Board Enhances Security with VideoProtein to Protect Students and Faculty, and Prevent Vandalism and Theft**

**Delray Beach, FL, November 1, 2007**– VideoProtein, the leader in IP video management, has been selected to implement a sophisticated video surveillance system at Meade County School District in Meade County, KY. Based on the industry-leading VideoProtein 3.0, the new video surveillance system will enable school security personnel to simultaneously monitor classrooms, campus grounds and parking lots, as well as their other facilities, allowing them to be alerted in real-time of security or safety threats.

“With concerns for student safety and the financial impact of property destruction, school administrators are looking for a solution to quickly identify potential problems,” said Anthony Pugliese, CEO of VideoProtein. “We are pleased that the Meade County School Board has selected VideoProtein’s solution to leverage their IT infrastructure and extend their vigilance over threats to safety and property damage which are an unfortunate reality at their correctional school location.”

VideoProtein 3.0 allows school officials to view live video from cameras at different locations simultaneously with high quality images. If a critical event occurs on campus, authorized school administrators and school police can all access live video remotely. Recorded video can be used in conjunction with an alarm system to prevent vandalism, theft, and arson. Images recorded during an alarm event can also be sent via email to specified users.

“We evaluated many security video management solutions and determined that VideoProtein best meets our needs,” added Jerry Pile, District Technology Coordinator for the Meade County School District.

VideoProtein 3.0 is an enterprise solution utilizing an open platform and non-proprietary hardware which enables organizations to quickly configure and effectively manage IP Video throughout the enterprise. VideoProtein 3.0 provides a browser-based solution for collecting, recording and managing live and archived surveillance video while optimizing use of bandwidth.

### **About Meade County School District**

The Meade County School District has 7 elementary schools, 1 middle school and 1 high school. These 9 schools provide various services to approximately 5,000 students each year.

### **About VideoProtein**

VideoProtein is the market leader in browser based IP Video Camera Management Software. VideoProtein was built with Java to run on Linux (RedHat), Sun (Solaris), Mac or Windows, and will support any IP video device.

VideoProtein users can access IP video cameras from multiple remote locations using any standard Internet browser with no client software required. Video can be monitored live or
